PROJECT SUN STREAK

WARNING NOTICE: INTELLIGENCE SOURCES AND METHODS INVOLVED

PROJECT NUMBER: 8914-I

SESSION NUMBER: 1

DATE OF SESSION: 890420

DATE OF REPORT: 890421

START: 0940

END: 1045

METHODOLOGY: CRV

VIEWER IDENTIFIER: 032

1. (S/NF/SK) MISSION: Describe the most unique aspect and function of the target site and provide an overhead sketch of the target area.
2. (S/NF/SK) VIEWER TASKING: Coordinates. Later 032 was given instructions to conduct a stage 6 exercise to sketch an overhead perspective of the site. He was also given the cue "most unique aspect and function of the site."
3. (S/NF/SK) COMMENTS: Next session will be spent obtaining more information on the most unique aspect and function and also developing a better overhead perspective.
4. EVALUATION:

HANDLE VIA SKEET CHANNELS ONLY
SPECIAL ACCESS REQUIRED

SUMMARY OF INFORMATION

Site is a man-made structure composed mainly of metal with elements of acrylic, plastic polymers and of hardened resins. There are several aspects to the site but the item that brought about the most significant level of interest in this session was that of a large, very powerful spinning object (see page 9). This object seems to be part of a larger or more complete aspect -- but during this session it became the center of attention.

Dimensional aspects associated with the site are curves, tubes, flat surfaces interfaced with curves, circles, discs, curving verticals and narrow light weight cylinders (see page 6,7). Textures and colors seem to be related mostly to smooth, silver, slick, glassy, white and the temperature seems to remain cold.

From overhead (see sketch page 10) in the first session I perceived that there were large objects or structures which had (principally to one side) a number of smaller objects or elevated areas. In the area from the overhead view I perceived that there were objects (things) rising and falling -- and at this time I began to feel very stressed and nervous about the enormous amount of activity at the site.

I also perceived there to be a black cloud moving on the horizon which blotted out the light source. There was another development in the rotating cylinders that appeared later in the session -- that was the enclosing of the space between the cylinders with some kind of clear material. This material looked like acrylic polymers and kind of looked like plastic (see sketch page 12).

The discs perceived seemed to rotate and bob alongside each other. There was something central to the disc -- it served as ballast, a balance point or guidance. There was a man lying down (all I could see was from the chest up) and he had a box on his head which was open at the face A/S like a helmet.

Panel.

4½ - spinning, constant rotation, power, energy,
gyroscopic, very unique powerful
object. I keep seen and focusing
on this particular sector - I think
A/s with the hub of Rotary wing A/C.

[function]

4½ - Black wave (cloud like) rolling across
space or sky - blotting out the light.
Object spinning much more slowly
now. All quite webbed or enclosed
stave cylinders - clear - acrylic
placers - resin, hard.
